HEALTHCARE INNOVATION PLATFORM

Investing in innovation. Creating health impact.

Health Collective Ventures identifies, supports, and advances **pharmaceutical, healthcare technology, biotech, and health innovation companies** developing transformative solutions for the most significant health challenges facing underserved populations — particularly diseases that disproportionately impact Black communities and other historically underserved groups.

> *"Health equity is strengthened when innovation, investment, and impact work together."*

01 WHY WE'RE NEEDED

Disparities demand a new approach.

Disproportionate disease burden

Sickle cell, chronic kidney disease, prostate cancer, lupus, and maternal health complications affect Black and Brown communities at markedly higher rates — yet receive a fraction of research and venture investment.

Worse health outcomes

Black women face pregnancy-related mortality rates roughly three times higher than white women. These gaps persist across income and education levels.

Underrepresentation in research

Clinical trials and real-world evidence often fail to include the populations most affected, leaving therapies less effective for high-burden communities.

The venture gap

Companies developing therapies for underserved communities receive a small share of venture funding, limiting the pipeline of innovations designed to reach them.

02 OUR FOCUS

Areas of high impact.

01 Sickle Cell Disease
02 Chronic Kidney Disease
03 Cardiovascular Disease
04 Diabetes
05 Prostate Cancer
06 Multiple Myeloma
07 Lupus
08 Maternal Health
09 Neurological Disorders
10 High-Burden Conditions

03 EVALUATION & MATCHING

Health Collective Index™

A scored assessment of readiness and impact — then a match to the investors, funds, and partners best aligned to back the company. It highlights strengths, flags gaps to close before raising, and explains why each partner is, or isn't, a fit.

1 Evaluate

A weighted assessment across science, clinical progress, market, capital needs, and impact on underserved patients.

2 Match

Scored against each investor's thesis, stage, check size, and sector focus to surface the funds most likely to be a fit.

3 Introduce

Every match is reviewed by our team. When both sides say yes, we make a personal introduction and track the outcome.

04 THE INVESTMENT CASE

Health equity is a market opportunity.

- **Large, underserved market.** Tens of millions of Americans face high-burden conditions, with limited specialized competition.
- **First-mover advantage.** Few investors focus squarely on health equity innovation — early, thesis-driven deployment creates category leadership and preferential deal access.
- **Policy tailwinds.** CMS, FDA, and public-health initiatives increasingly prioritize equity in coverage, review, and reimbursement.
- **Outsized return potential.** Solving high-unmet-need conditions can command strong pricing, rapid adoption, and durable market position.

"The future of healthcare should be defined not only by scientific breakthroughs, but by who benefits from them."
